EVERLASTING VALVE COMPANY
WEARS IN, NOT OUT®

Everlasting Valves in Ash Handling

For nearly 30 years Everlasting Valve Company has been supplying their self-lapping rotating disc valves to many companies around the world for handling fly ash, bed ash and bottom produced in coal-fired thermal power generation plants. The unique design of the self-lapping rotating discs combined with the open body design produces a valve that gives tight sealing over the life of the valve.

Everlasting Valve's flat discs rotate which polishes scratches from the sealing surfaces on the disc and seat, and spreads wear evenly providing tight shutoff and longer service life. Unlike other types of valves, there are no pockets or gaps into which fines can accumulate. As a result, the open body design of the Everlasting valve resists packing and is self-cleaning. It is for these reasons that Everlasting valves are the preferred valves for fly ash, bed ash and bottom ash handling around the world.

The following are just some of our customers using Everlasting Bulk Material Valves for ash handling:

Alabama Power	USA
Cambria Co-Gen Co.	USA
Delta Energy	Australia
Georgia Power	USA
HPB Sistemas de Energia	Brazil
Israel Electric Corporation	Israel
Kansas City Power & Light	USA
MBE EWB Ltd.	Hungary
Mississippi Power	USA
NTPC Ltd.	India
NIPSCO	USA
Salt Rivers Materials Group	USA
Southern Company	USA
Tampa Electric	USA
Tata Power	India
